**MERK**<sup>®</sup> | MUTUAL  
FUNDS

Since the Funds primarily invest in foreign currencies, changes in currency exchange rates will affect the value of what the Funds own and the price of the Funds' shares. Investing in foreign instruments bears a greater risk than investing in domestic instruments for reasons such as volatility of currency exchange rates and, in some cases, limited geographic focus, political and economic instability, and relatively illiquid markets. The Funds are subject to interest rate risk which is the risk that debt securities in the Funds' portfolio will decline in value because of increases in market interest rates. The Funds may also invest in derivative securities which can be volatile and involve various types and degrees of risk. As a non-diversified fund, the Merk Hard Currency Fund will be subject to more investment risk and potential for volatility than a diversified fund because their portfolios may, at times, focus on a limited number of issuers. For a more complete discussion of these and other Fund risks please refer to each Fund's prospectus.

*Before investing you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other information is in the prospectus, a copy of which may be obtained by calling 1-866-MERK FUND or visiting the Fund's website. Please read the prospectus carefully before you invest.* Foreside Fund Services, LLC, distributor
